

Description task:

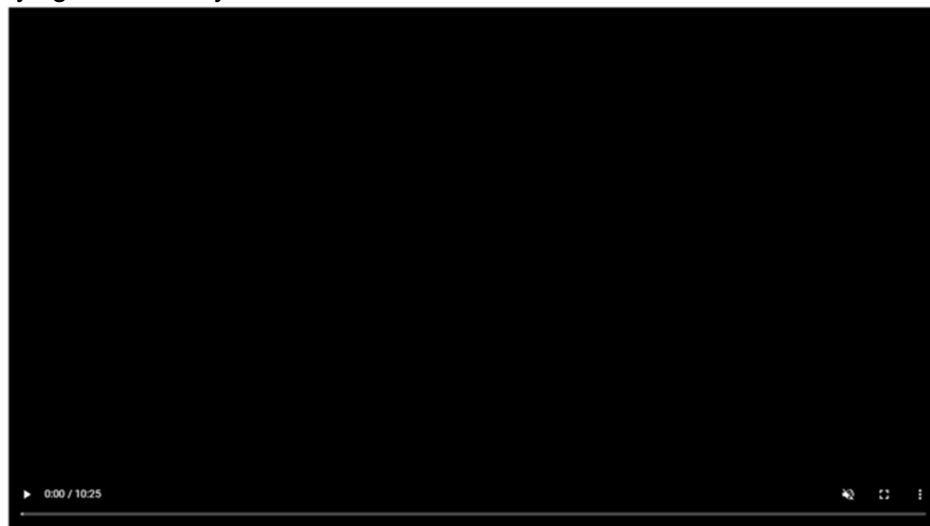

We will ask you to watch a muted video and detect when the pair in the video has a synchronized smile.

A synchronized smile is two people having the same “type” of smile. For example, is the energy in which they smile matching, are they both showing teeth, are they both smiling with their eyes as well as their mouth?

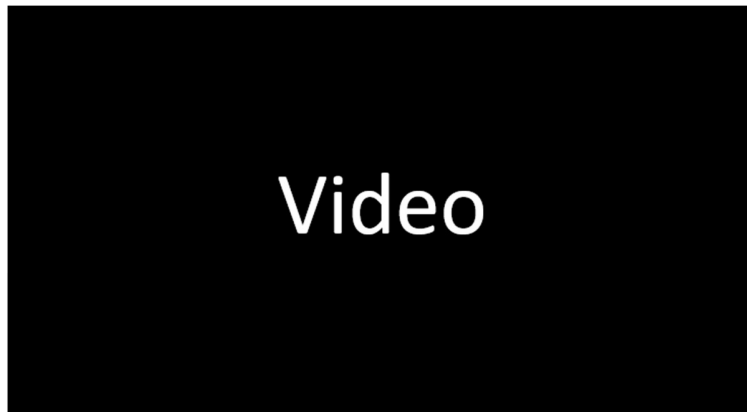

During the study, we will show you a series of 3 short videos, one after the other. All the Videos are muted. That is intended. You can take a break before each video if you want.

1. When you are ready to start press the “Start” Button (1) or spacebar and the video of the pair will start playing immediately.

2. Everytime you see that the two people in the video have a synchronized smile, press and hold the “In Sync” (2) button underneath the video (or press and hold the spacebar), for each occurrence and duration of a similar smile.

3. Whenever you release the button, a small message is displayed at the right bottom corner of the screen (3). Yay!

#### FAQ:

Q: Do I keep pressing the button if I think the two people are smiling similarly for a long time?

A: Yes, hold the button pressed for as long as you think both persons are smiling in a similar way. Release and press again for another instance of a similar smile.

Q: What happens if I accidentally press the button?

A: Don't worry, just keep going for when you see the next "insync" smile.

Q: It is really hard to know when the people are exactly "insync." Am I not pressing the button enough?

A: Try not to overthink it and use your magnificent human intuition to press the button when you think there is similarity in the smiles or chemistry between the shared smiles.

Q: Do I need to do anything else after the 3 Videos are played?

A: No as soon as you see the "Thanks for participation" - Screen your Data was successfully collected and you are finished. Thanks!
